

[Thank you for becoming an Avenue 18 Computer Service client!](#)

Here are some Windows tools, programs and utilities that I highly recommend.
Some are free or shareware tools, others like Backup Drives have Amazon links.
Contact me for any assistance setting up these great tools etc. Cheers!

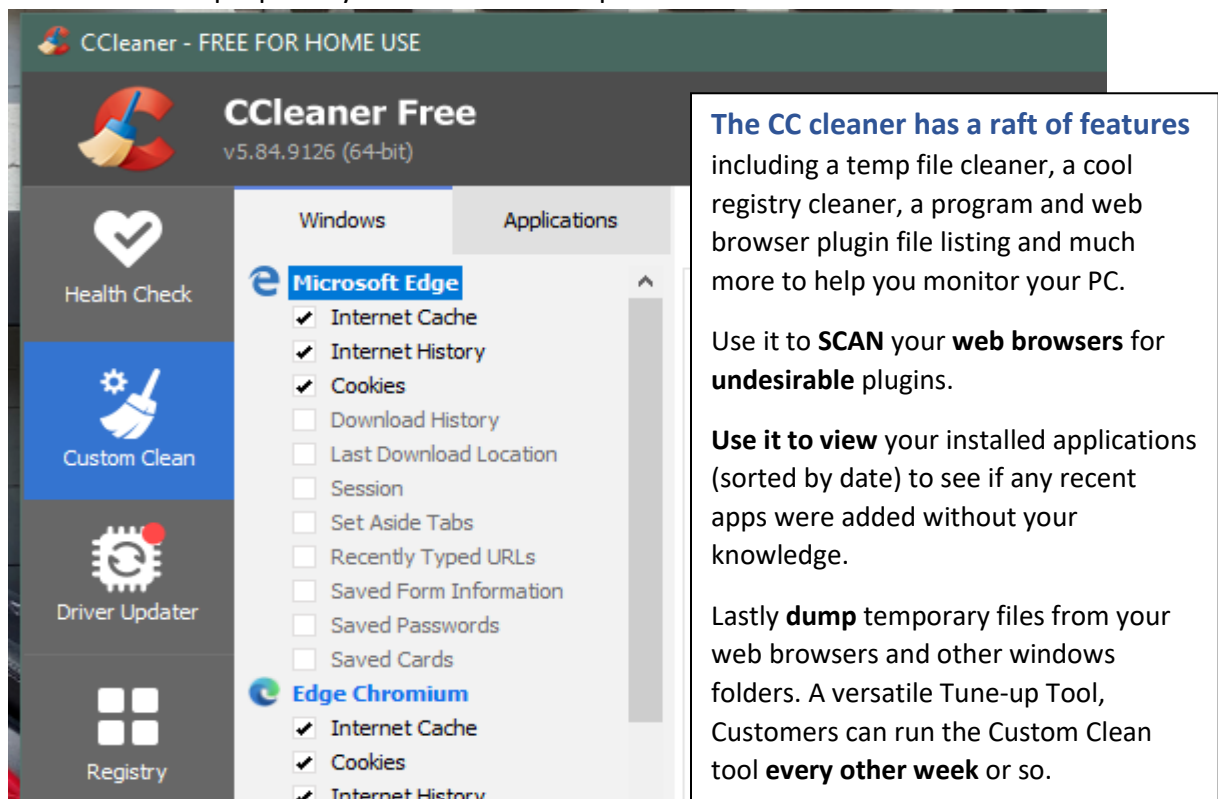

- 1) **Microsoft Office**, Home edition, it allows up to **five users** so it's great for Home/Small Office environments. You get the full installable versions of their most popular office applications including Word Excel Outlook PowerPoint and more. Included is 1TB of Cloud Storage. Visit www.office.com to get started.

2) **Piriform makes the Defraggler and CCleaner utilities.** The Defraggler can give you detailed information about hard drive health, how long it's been running plus give it a quick tune up. Get your FREE Version at www.piriform.com or www.ccleaner.com

3) **CCleaner Multi-purpose system tool and “Crap-Cleaner”** use above links.

4) **SNIPPING TOOL...** From your Start Menu type **Snipping** to locate this super handy Screen Capture Tool. Rt Click and add a link to SNIPPER into the **Task Bar** Area. Use it to **CAPTURE** and **Save any image** on your PC Screen. Try using **SNIPPER** to Capture a popup Error Message or

other info you would like to Save & Share. **Then PASTE the image** directly from the SNIPPER to an EMAIL or WORD Document so you can **share it** with your technical advisor or White House pastry chef (as available). Makes Tech Support Easier! Included with Windows.

- 5) **iDRIVE Cloud Backup...5TB...for around \$60.00/year. Use on 5 PC/MAC or phone/tablets. TOP RATED** Cloud Backup Service. SoCal Based...Great for PCs, Laptops, Tablets, MAC O/S and Android...Run Backups at night and be sure to include any mapped network storage drives that are Chock Full O' Data. [CLICK LINK](#) for iDrive Cloud Backup.
- 6) **LASTPASS PASSWORD MANAGER...** this is the smart **password manager** that I use personally. It assists all your logins, helps you use different credit cards as needed and features strong 2FA (Two Factor) **authentication App**. It can manage multiple accounts from within a single web address and it works with your smart phones and devices for password management across your digital world. A must have security tool. Rated number one. [CLICK LINK](#)
- 7) **TEAMVIEWER** The Number -1- Remote Support/Remote access application. Your computer consultant will likely use this or a similar product to perform Remote Service on your PC. Built-In to our comprehensive Maintenance Service (NinjaONE) Program. Essential for **on-going Remote support clients**. Call for our Link or visit www.Teamviewer.com.
- 8) **FOLDER VIEW** from www.Mindgems.com Size up all your folders and clean them. Find where all the **Big Files, Music Pics and Data** are stored. Useful for managing DRIVE RESOURCES and Backup Planning. PRO Version needed to check Network based Drives and Folders.
- 9) **NOTEPAD** → Included with Windows since Day 1, the Notepad is the pure ASCII text editor you need to create **indestructible documents** housing passwords, activation keys and other computer technical notes. The notepad files do not require a sophisticated word processor to view or edit making them more *resistant to damage* than conventional word processor files etc. Plus you can paste information from the web into the notepad and it will **strip out everything** but the text characters – leaving clean text.
- 10) **A TOOLS FOLDER**. As a practical and intelligent convention → store all your technical files and service notes in a C:\ tools folder...that way your technician can keep useful notes there and you can look there for any special activation keys or helpful instructions. For example you can store a copy of your office specific username and password here.

...but wait there's more!

- 11) **MAILWASHER PRO... kill junk mail before it reaches Outlook** or your email web page. Mailwasher Pro creates sophisticated filters that block and delete undesirable and offensive emails. More than just block and delete **you can bounce emails** which let the sender and sender's mail server know something is wrong - which can help alert them to destructive

spammers. In Outlook you will want to deactivate the auto check mail feature so that you can check mail **after** the mail has been thoroughly washed. Get a copy here: [CLICK LINK](#)

12) **ULTRAFILESEARCH.** Windows SEARCH is slow, clumsy and wastes time.

Ultra File Search solves that problem by offering much faster searches with features that could come in very handy for more complex searches. Extremely useful for simple file searches and keyword searches. Visit www.UltraFileSearch.com

DESKTOPOK! ARE YOU TIRED OF RE-ARRANGING YOUR ICONS AFTER A RE-BOOT?

ARE YOUR ICONS DRIFTING AROUND, GETTING LOST AND MISPLACED?
