LastPass*

You may want to use a Two-Step Authenticator App for Really Secure Website Logins...

Good News! The 2-Factor Authenticator setup is incredibly simple, and it works with LastPass, our favorite Password Manager and Form filler!

LastPass is the preferred Password manager and Form Fill application with the ability to store multiple addresses/credit cards and profiles. It saves/stores/generates new passwords of adjustable complexity. Working across all your favorite Web Browsers and Devices it provides a library of your current passwords, usernames, notes and wisely appends new logins and passwords as you create them.

The LastPass Authenticator is a 6 Digit Code Generator App you run on your phone. Open the app and your 6 Digit code appears automatically for the Web Login key you need now. This process is called Multi Factor Authentication ie.. **MFA** or 2 Factor Authentication as it is most commonly practiced. Each new key “times out” in a few minutes and fresh ones are continually generated to automate your secure Website logins.

Setup is Easy! Setup up each app in your digital world with The Authenticator wherever the 2FA (Two Factor Authentication) is featured. They will display a **BARCODE** at the time of initial setup at your Bank or other Vendor Website. Scan this BARCODE with the LastPass Authenticator and you are **instantly integrated** into the MFA secure login platform. Now you will need a Password and a generated 6 Digit Key to log-in to your most secure websites. Most major email services have Multi Factor Authentication including Amazon, Outlook/Hotmail, and many Banks.

Visit [LastPass](#) to sign up for the Password Manager Service and Web/Chrome plug-in. Now just \$3 per Month 1 user and \$4 per Month with a Family Plan w/6 Users. The LastPass Authenticator is free on Google PlayStore, Apple and Windows App Stores. Lastpass is an Avenue 18 Computer favorite and a fully supported product for your computer. Try it today!

Thank you and please call if you have any questions,
